                                                                   셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes a modified therapeutic peptide (I)

comprising a therapeutically active amino acid region (III) and a

comprising a therapeutically active amino acid region (III) and a

a less therapeutically active amino acid region (IV), which covalently

conds with amino/hydroxyl/hiol groups on blood components to form a

peptidase stabilised therapeutic peptide composed of 3-50 amino acids.

(I) are useful for modifying therapeutic peptides e.g. hormones, growth

factors and neurotransmitters, to protect them from peptidase activity in

vivo for the treatment of various disorders. Endogenous therapeutic

conjunction of suitable as drug candidates as they require frequent

administration due to rapid degradation by peptidases in the body.

Modifying and attaching therapeutic peptides to albumin prevents or

reduces the action of peptidases to increase length of activity (half

IIte) and specificity as bonding to large molecules decreases

intracellular uptake and interference with physiological processes.

Thibaudeau K;

```
comprising a therapeutically active amino acid region (III) and a reactive group (II) (e.g. succinimidyl and maleimido groups) attached to a less therapeutically active amino acid region (III) and a less therapeutically active amino acid region (IV), which covalently bonds with amino/hydroxyl/thiol groups on blood components to form a peptidase stabilised therapeutic peptides composed of 3-50 amino acids.

(I) are useful for modifying therapeutic peptides e.g. hormones, growth actors and neurotransmitters, to protect them from peptidase activity in vivo for the treatment of various disorders. Endogenous therapeutic peptides are not suitable as drug candidates as they require frequent administration due to rapid degradation by peptidases in the body.

Modifying and attaching therapeutic peptidase to albumin prevents or reduces the action of peptidases to increase length of activity (half intracellular uptake and interference with physiological processes.

ARB90829 to AAB92441 represent peptides which can be used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
present invention describes a modified therapeutic peptide (I)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ۲;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Length 32;

The present invention provides a number of parathyroid hormone (PTH) or parathyroid hormone-related protein (PTHrP) analogues. These act as PTH2 receptor agonists or antagonists and can be used in the treatment of disorders resulting from altered or excessive action of the PTH2 receptor, e.g. abnormal CNS functions, abnormal pancreatic functions, divergence from normal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or a hypothalmic disease. The present sequence is a peptide analogue of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New parathyroid hormone analogs, used for treating e.g. abnormal CNS or pancreatic functions, abnormal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or hypothalmic disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention provides a number of parathyroid hormone (PTH) or parathyroid hormone-related protein (PTHrP) analogues. These act as PTH2 receptor agonists or antagonists and can be used in the treatment of disorders resulting from altered or excessive action of the PTH2 receptor, e.g. abnormal CNS functions, abnormal pancreatic functions, divergence from normal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or a hypothalmic disease. The present sequence is a peptide analogue of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New parathyrbid hormone analogs, used for treating e.g. abnormal CNS or pancreatic functions, abnormal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or hypothalmic disease.

                                                                                                                                                                                                                                                                                                       ï
                                                                                                                                                                                                                                                                         Peptide analogues have high affinity for PTH cell surface receptors, but do not stimulate production of secondary messenger molecules. They may be used in inhibition of PTH action, and in diagnosis and treatment of osteoporosis, hypercalcemia and hyperparathyroidism. Analogues may also be used in treatment of tumours and other cells overproducing peptide hormone-like substances, and immune diseases eg. allergic inflammation and hyperactive lymphocytes. Naturally occuring PTH levels may also be
                                                                                                                                                                                                                                New para:thyroid hormone analogues - which inhibit hormone activity by binding receptors while not producing second messenger molecules.

They may be used in inhibition of PTH action, and in diagnosis and treatment of osteoporosis, hypercalcemia and hyperparathyroidism. Analogues may also be used in treatment of tumours and other cells overproducing peptide hormone-like substances, and immune diseases eg. allergic inflammation and hyperactive lymphocytes. Naturally occuring PTH levels may also be
                                                                                                                         para:thyroid hormone analogues - which inhibit hormone activity by

                                                                                                                                                                                                                                  원
                                                                                                                                                                                                                 ï
                                                                                AAW20003 is a cyclised peptide derived from the N-terminal sequence of human parathyroid hormone (PTH). The peptide is able to bind to PTH receptors and stimulate adenylate cyclase activity. Cyclised PTH peptides stimulate bone growth and thus are useful in the treatment of osteoporosis and bone fractures. Optionally they may be administered concurrently with antiresorptive therapy (e.g. bisphosphonate and calicitonin). N. B. sequence not given in the specification, created from known sequence of amino acids 1-34 of human PTH
                           New cyclic analogues of parathyroid hormone - having dissulphide or amide bond between residues 13 and 17 and/or between residues 26 and 30, useful for treating, osteoporosis and bone fractures.
                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                              Cyclised [Nle 8,18, Tyr 34] human parathyroid hormone (1-34) amide.
                                                                                                                                                                                                                                                                                                                                                                               Parathyroid hormone; PTH; amino terminus; cyclic; analogue; adenylate cyclase activity; bone growth; osteoporosis; fracture;

                                                                                                                                                         AAW19997 is a cyclised peptide derived from the N-terminal sequence of minan parathyroid hormone (PTH). The peptide is able to bind to PTH receptors and stimulate adenylate cyclase activity. Cyclised PTH peptides stimulate bone growth and thus are useful in the treatment of osteoporosis and bone fractures. Optionally they may be administered concurrently with antiresorptive therapy (e.g. bisphosphonate and calicitonin). N.B. sequence not given in the specification, created from known sequence of amino acids 1-34 of human PTH
New cyclic analogues of parathyroid hormone - having di:sulphide or amide bond between residues 13 and 17 and/or between residues 26 and 30, useful for treating osteoporosis and bone fractures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Cyclised [Nle 8,18, Tyr 34] human parathyroid hormone (1-34) amide.

                                                                                                                                                                                                                                                  q
                                                                                                                                                                                                                                                                                                                 ï
                                                                          AAW20009 is a cyclised peptide derived from the N-terminal sequence of human parathyroid hormone (PTH). The peptide is able to bind to PTH receptors and stimulate adenylate cyclase activity. Cyclised PTH peptides stimulate bone growth and thus are useful in the treatment of osteoporosis and bone fractures. Optionally they may be administered concurrently with antiresorptive therapy (e.g. bisphosphonate and calicitonin). N.B. sequence not given in the specification, created from known sequence of amino acids 1-34 of human PTH
                        cyclic analogues of parathyroid hormone - having disulphide or amide i between residues 13 and 17 and/or between residues 26 and 30, useful
                                                                                                                                                                                               Gaps
                                                                                                                                                                                               ij

                                                                                                                                                                              The present sequence is a specific example of a human parathyroid hormone (hPTH) analogue from fragment 1-34 in which at least one of the amino acid residues at positions 7, 11, 23, 24, 27, 28 and 31 is cyclohexylalanine (Cha). In this example the Leu residue at position 7 and 11 in the wild-type have been substituted by Cha, and the Met residue at position 8 and 18 in the wild type have been substituted by Nle. The hPTH analogues stimulate bone growth and so are useful in human or veterinary medicine for treatment of osteoporosis and bone fracture, optionally in conjunction with anti-resorptive therapy (bisphosphonates specification). It corresponds to the known hPTH 1-34 fragment with the modifications as stated in the claim
                                                 New variants of human parathyroid hormone 1-34 peptide - which stimulate bone growth and are used for treatment of osteoporosis and bone fracture
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Parathyroid hormone; parathormone; bone growth; bone fracture; osteroporosis; anti-resorptive therapy; calcitonin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /note= "1-amino-1-cyclohexanecarboxylic acid"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Parathyroid hormone related protein; PTH-2 receptor; PTHrP; osteoporosis;
                                                                                                                                                                                                                                                                              paraflyroid hormone-related protein (PTHYP). They stimulate bone growth, and are useful in the treatment of diseases or disorders associated with bone growth deficiency, e.g. osteoporosis and bone fractures. They are optionally used in conjunction with anti-resorptive therapy, e.g. with bis-phosphonates or calcitonin. The present sequence represents a specifically claimed peptide. NB: This sequence is not shown explicitly
                                                                                                                                                                                                                                                                                                                                              the patent but was generated using the sequence of human parathyroid mone as shown in Entrez Locus Number AAA29146
          Parathyroid hormone analogue peptide compounds - used for stimulating bone growth, e.g. in treatment of bone fractures or osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                        ;;
                                                                                                                                                                                                                                                                                                                                                                                                   Length 34;

The present sequence represents the biologically active region of human parathyroid hormone (PTH). PTH is a major regulator of calcium comessais whose principal target cells occur in bone and kidney. Some of the renal and skeletal actions of PTH appear to be minicked by PTH related protein (PTHrP) which are believed to interact with the PTH receptor in these tissues. The invention creates hybrids (AAW481394 the 189398) of the active regions of PTH and PTHrP (AAW481391 to determine the residues involved in ligand-specificity of the PTH-2 receptor. It was determined binding affinity. The invention shows that by changing these two residues in PTHrP to the corresponding residues in PTHrP peptide analogues are created which are claimed to be selective agonists or antagonists of the PTH-2 receptor (AAW48399 and AAW48400). The analogues are created which are claimed to be useful in treating diseases involving altered or excessive activation of PTH-2 receptors (by inhibiting activation) while agonistic PTHrP peptide analogues are claimed to be useful in treating osteoporosis (by activating both PTH and PTH-2 receptors). PTHrP analogues are also useful for studying both PTH and PTH-2 receptors and to identify specific sites of ligand-
                                                                                                                                                                           Parathyroid hormone-related peptide analogues with agonist activity - at PTH/PTHrP receptor and either agonist or antagonist activity at PTH-2 receptor, used e.g. for treatment of osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; parathyroid hormone; parathyroid hormone-related protein; PTH; PTHrP; analogue; abnormal CNS function; pancreatic function; mineral metabolism; male infertility; abnormal blood pressure;

                                                                                                                                                                                                                                                                                                                                                                                                               ;;
                                                                                                                                                                                                                                                                                 The present invention provides a number of parathyroid hormone (PTH) or parathyroid hormone-related protein (PTHrP) analogues. These act as PTH2 receptor agonists or antagonists and can be used in the treatment of disorders resulting from altered or excessive action of the PTH2 receptor, e.g. abnormal CNS functions, abnormal pancreatic functions, infertility, abnormal blood pressure or a hypothalmic disease. The present sequence is a peptide analogue of the invention
                                                                                                                                                                                                                           New parathyroid hormone analogs, used for treating e.g. abnormal CNS or pancreatic functions, abnormal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or hypothalmic disease.

The present invention provides a number of parathyroid hormone (PTH) or parathyroid hormone-related protein (PTHP) analogues. These act as PTH2 receptor agonists or antagonists and can be used in the treatment of disorders resulting from altered or excessive action of the PTH2 receptor, e.g. abnormal CNS functions, abnormal pancreatic functions, divergence from normal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or a hypothalmic disease. The present sequence is a peptide analogue of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New parathyroid hormone analogs, used for treating e.g. abnormal CNS or pancreatic functions, abnormal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or hypothalmic disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human, parathyroid hormone, parathyroid hormone-related protein, PTH; PTH:P, analogue, abnormal CNS function, pancreatic function; mineral metabolism, male infertility; abnormal blood pressure;

New parathyroid hormone analogs, used for treating e.g. abnormal CNS or pancreatic functions, abnormal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or hypothalmic disease.
                                                                                                                                                                                                                                                                                                                                                                                           The present invention provides a number of parathyroid hormone (PTH) parathyroid hormone-related protein (PTHrP) analogues. These act as preceptor agonists or antagonists and can be used in the treatment of disorders resulting from altered or excessive action of the PTH2 receptor, e.g. abnormal CNS functions, abnormal pancreatic functions, divergence from normal mineral metabolism and homeostabis, male infertility, abnormal blood pressure or a hypothalmic disease. The present sequence is a peptide analogue of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; parathyroid hormone; parathyroid hormone-related protein; PTH; PTHrP; analogue; abnormal CNS function; pancreatic function; mineral metabolism; male infertility; abnormal blood pressure; hypothalmic disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1;
                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention provides a number of parathyroid hormone (PTH) or parathyroid hormone-related protein (PTHrP) analogues. These act as PTH2 receptor agonists or antagonists and can be used in the treatment of disorders resulting from altered or excessive action of the PTH2 receptor, e.g. abnormal CNS functions, abnormal pancreatic functions, infertility, abnormal blood presente or a hypothalmic disease. The present sequence is a peptide analogue of the invention
                                                                                                                                                                                                                                                                                                                     New parathyroid hormone analogs, used for treating e.g. abnormal CNS or pancreatic functions, abnormal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or hypothalmic disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; parathyroid hormone; parathyroid hormone-related protein; PTH; PTHrP; analogue; abnormal CNS function; pancreatic function; mineral metabolism; male infertility; abnormal blood pressure;

The present invention provides a number of parathyroid hormone (PTH) or parathyroid hormone-related protein (PTHrP) analogues. These act as PTH2 receptor agonists or antagonists and can be used in the treatment of disorders resulting from altered or excessive action of the PTH2 receptor, e.g. abnormal CNS functions, abnormal pancreatic functions, divergence from normal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or a hypothalmic disease. The present sequence is a peptide analogue of the invention
                                                                                                                                                                                                                                                                         New parathyroid hormone analogs, used for treating e.g. abnormal CNS or panoreatic functions, abnormal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or hypothalmic disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; parathyroid hormone; parathyroid hormone-related protein; PTHrP; analogue; abnormal CNS function; pancreatic function; mineral metabolism; male infertility; abnormal blood pressure;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1;
                                                                                                                                                                                                                                                                                                                                                                      The present invention provides a number of parathyroid hormone (PTH) or parathyroid hormone-related protein (PTHrP) analogues. These act as PTH2 receptor agonists or antagonists and can be used in the treatment of disorders resulting from altered or excessive action of the PTH2 receptor, e.g. abnormal CNS functions, abnormal pancreatic functions, divergence from normal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or a hypothalmic disease. The present sequence is a peptide analogue of the invention
                                                                                                                                                                                                                                                                  New parathyroid hormone analogs, used for treating e.g. abnormal CNS or pancreatic functions, abnormal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or hypothalmic disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; parathyroid hormone; parathyroid hormone-related protein; PTH; PTHrp; analogue; abnormal CNS function; pancreatic function; mineral metabolism; male infertility; abnormal blood pressure;

The present invention provides a number of parathyroid hormone (PTH) or parathyroid hormone-related protein (PTHrP) analogues. These act as PTH2 receptor agonists or antagonists and can be used in the treatment of disorders resulting from altered or excessive action of the PTH2 receptor, e.g. abnormal CNS functions, abnormal pancreatic functions, divergence from normal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or a hypothalmic disease. The present sequence is a peptide analogue of the invention
                                                                                                                                                                                                                New parathyroid hormone analogs, used for treating e.g. abnormal CNS or pancreatic functions, abnormal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or hypothalmic disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; parathyroid hormone; parathyroid hormone-related protein; PTH; PTHrP; analogue; abnormal CNS function; pancreatic function; mineral metabolism; male infertility; abnormal blood pressure;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /note= "wild-type Phe substituted by Tyr"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ઠે
                                                                                                                                                                                                                                                                                                                                       The present invention provides a number of parathyroid hormone (PTH) or parathyroid hormone-related protein (PTHrP) analogues. These act as PTH2 receptor agonists or antagonists and can be used in the treatment of disorders resulting from altered or excessive action of the PTH2 receptor, e.g. abnormal CNS functions, abnormal pancreatic functions, divergence from normal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or a hypothalmic disease. The present sequence is a peptide analogue of the invention
                                                                                                                                                                                                                                                       New parathyroid hormone analogs, used for treating e.g. abnormal CNS or pancreatic functions, abnormal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or hypothalmic disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; parathyroid hormone; parathyroid hormone-related protein; PTH; PTHFP; analogue; abnormal CNS function; pancreatic function; mineral metabolism; male infertility; abnormal blood pressure; hypothalmic disease.

New parathyroid hormone analogs, used for treating e.g. abnormal CNS or pancreatic functions, abnormal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or hypothalmic disease.
                                                                                                                                                                                                                                                                                                       The present invention provides a number of parathyroid hormone (PTH) parathyroid hormone-related protein (PTH-P) analogues. These act as preceptor agonists or antagonists and can be used in the treatment of disorders resulting from altered or excessive action of the PTH2 receptor, e.g. abnormal CNS functions, abnormal pancreatic functions, divergence from normal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or a hypothalmic disease. The present sequence is a peptide analogue of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; parathyroid hormone; parathyroid hormone-related protein; PTH; PTHP; analogue; abnormal CNS function; pancreatic function; mineral metabolism; male infertility; abnormal blood pressure; hypothalmic disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /note= "wild-type Phe substituted by Tyr"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Score 148.5; DB 3;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ä
                                                                                                                                                                                                                                              The present invention provides a number of parathyroid hormone (PTH) or parathyroid hormone-related protein (PTHrP) analogues. These act as PTH2 receptor agonists or antagonists and can be used in the treatment of disorders resulting from altered or excessive action of the PTH2 receptor, e.g. abnormal CNS functions, abnormal pancreatic functions, divergence from normal mineral metabolism and homeostatals, male infertility, abnormal blood presente or a hypothalmic disease. The present sequence is a peptide analogue of the invention
                                                                                                                                     New parathyroid hormone analogs, used for treating e.g. abnormal CNS or pancreatic functions, abnormal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or hypothalmic disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human, parathyroid hormone, parathyroid hormone-related protein, PTH:

The present invention provides a number of parathyroid hormone (PTH) or parathyroid hormone-related protein (PTHrP) analogues. These act as PTH2 receptor agonists or antagonists and can be used in the treatment of disorders resulting from altered or excessive action of the PTH2 receptor, e.g. abnormal CNS functions, abnormal pancreatic functions, divergence from normal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or a hypothalmic disease. The present sequence is a peptide analogue of the invention
                                                                                              New parathyroid hormone analogs, used for treating e.g. abnormal CNS or pancreatic functions, abnormal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or hypothalmic disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; parathyroid hormone; parathyroid hormone-related protein; PTH; PTHrP; analogue; abnormal CNS function; pancreatic function; mineral metabolism; male infertility; abnormal blood pressure;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /note= "wild-type Phe substituted by Tyr"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ä
                                                                                                                                                                                                                                  The present invention provides a number of parathyroid hormone (PTH) or parathyroid hormone-related protein (PTHrP) analogues. These act as PTH2 receptor agonists or antagonists and can be used in the treatment of disorders resulting from altered or excessive action of the PTH2 receptor, e.g. abnormal CNS functions, abnormal pancreatic functions, divergence from normal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or a hypothalmic disease. The present sequence is a peptide analogue of the invention
                                                                                                                                                   New parathyroid hormone analogs, used for treating e.g. abnormal CNS or pancreatic functions, abnormal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or hypothalmic disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; parathyroid hormone; parathyroid hormone-related protein; PTH;

                                                                                                                                                                                                                                                                                                                                                                                                                                                        1;
                                                                                                                                                                          The present invention provides a number of parathyroid hormone (PTH) or parathyroid hormone-related protein (PTHrP) analogues. These act as PTH2 receptor agonists or antagonists and can be used in the treatment of disorders resulting from altered or excessive action of the PTH2 receptor, e.g. abnormal CNS functions, abnormal pancreatic functions, divergence from normal mineral metabolism and homeostabis, male infertility, abnormal blood pressure or a hypothalmic disease. The present sequence is a peptide analogue of the invention
                                                          New parathyroid hormone analogs, used for treating e.g. abnormal CNS or pancreatic functions, abnormal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or hypothalmic disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New parathyroid hormone analogs, used for treating e.g. abnormal CNS or pancreatic functions, abnormal mineral metabolism and homeostasis, male

```
New parathyroid hormone analogs, used for treating e.g. abnormal CNS or pancreatic functions, abnormal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or hypothalmic disease.
                                                   The present invention provides a number of parathyroid hormone (PTH) parathyroid hormone-related protein (PTH-P) analogues. These act as parathyroid hormone-related protein (PTH-P) analogues. These act as parathyroid normal metabolists and can be used in the treatment of disorders resulting from altered or excessive action of the PTH2 receptor, e.g. abnormal CNS functions, abnormal pancreatic functions, divergence from normal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or a hypothalmic disease. The present sequence is a peptide analogue of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; parathyroid hormone; parathyroid hormone-related protein; PTH; PTHP; analogue; abnormal CNS function; pancreatic function; mineral metabolism; male infertility; abnormal blood pressure; hypothalmic disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

The present invention provides a number of parathyroid hormone (PTH) or parathyroid hormone-related protein (PTHrP) analogues. These act as PTH2 receptor agonists or antagonists and can be used in the treatment of disorders resulting from altered or excessive action of the PTH2 receptor, e.g. abnormal CNS functions, abnormal pancreatic functions, divergence from normal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or a hypothalmic disease. The present sequence is a peptide analogue of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention provides a number of parathyroid hormone (PTH) or parathyroid hormone-related protein (PTHrP) analogues. These act as PTH2 receptor agonists or antagonists and can be used in the treatment of disorders resulting from altered or excessive action of the PTH2 receptor, e.g. abnormal CNS functions, abnormal pancreatic functions, divergence from normal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or a hypothalmic disease. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New parathyroid hormone analogs, used for treating e.g. abnormal CNS or pancreatic functions, abnormal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or hypothalmic disease.
                                                                                                                                                                                                                                                                                                                                                                                                               Human; parathyroid hormone; parathyroid hormone-related protein; PTH; PTHP; analogue; abnormal CNS function; pancreatic function; mineral metabolism; male infertility; abnormal blood pressure; hypothalmic disease.
disorders resulting from altered or excessive action of the PTH2 receptor, e.g. abnormal CNS functions, abnormal panereatic functions, divergence from normal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or a hypothalmic disease. The present sequence is a peptide analogue of the invention

These act as PTH2 receptor agonists or antagonists and can be used in the treatment of disorders resulting from altered or excessive action of the PTH2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New parathyroid hormone analogs, used for treating e.g. abnormal CNS or pancreatic functions, abnormal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or hypothalmic disease.
                                                                                                                                                                                                                                                              Human; parathyroid hormone; parathyroid hormone-related protein; PTH; PTHrP; analogue; abnormal CNS function; pancreatic function; mineral metabolism; male infertility; abnormal blood pressure;

```

```
New parathyroid hormone analogs, used for treating e.g. abnormal CNS or pancreatic functions, abnormal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or hypothalmic disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                         Human, parathyroid hormone, parathyroid hormone-related protein; PTH;
PTHrP, analogue, abnormal CNS function, pancreatic function,
mineral metabolism, male infertility, abnormal blood pressure;
receptor agonists or antagonists and can be used in the treatment of disorders resulting from altered or excessive action of the PTH2 receptor, e.g. abnormal CNS functions, abnormal pancreatic functions, divergence from normal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or a hypothalmic disease. The present sequence is a peptide analogue of the invention
                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides a number of parathyroid hormone (PTH)

                                                                                                                                                                                                                                                                                 Human; parathyroid hormone; parathyroid hormone-related protein; PTH;
PTHrP; analogue; abnormal CNS function; pancreatic function;
mineral metabolism; male infertility; abnormal blood pressure;
parathyroid hormone-related protein (PTH.P) analogues. These act as P receptor agoniers or antagoniers and can be used in the treatment of disorders resulting from altered or excessive action of the PTH2 receptor, e.g. abnormal CNS functions, abnormal pancreatic functions, divergence from normal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or a hypothalmic disease. The present sequence is a peptide analogue of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  PTH;
The present invention provides a number of parathyroid hormone (PTH) parathyroid hormone-related protein (PTHP) analogues. These act as Preceptor agonists or antagonists and can be used in the treatment of disorders resulting from altered or excessive action of the PTH2 receptor, e.g. abnormal CNS functions, abnormal pancreatic functions, divergence from normal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or a hypothalmic disease. The present sequence is a peptide analogue of the invention

                         The present invention provides a number of parathyroid hormone (PTH) or parathyroid hormone-related protein (PTHrP) analogues. These act as PTH2 receptor agonists or antagonists and can be used in the treatment of disorders resulting from altered or excessive action of the PTH2 receptor, e.g. abnormal CNS functions, abnormal pancreatic functions, divergence from normal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or a hypothalmic disease. The present sequence is a peptide analogue of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention provides a number of parathyroid hormone (PTH) or parathyroid hormone-related protein (PTHrP) analogues. These act as PTH2 receptor agonists or antagonists and can be used in the treatment of disorders resulting from altered or excessive action of the PTH2 receptor, e.g. abnormal CNS functions, abnormal pancreatic functions, divergence from normal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or a hypothalmic disease. The present sequence is a peptide analogue of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New parathyroid hormone analogs, used for treating e.g. abnormal CNS or pancreatic functions, abnormal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or hypothalmic disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               "OTHER=p-benzoyl-phenylalanine, D-form residue"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PTH;

                                                  7;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention provides a number of parathyroid hormone (PTH) or parathyroid hormone-related protein (PTHrP) analogues. These act as PTH2 receptor agonists or antagonists and can be used in the treatment of disorders resulting from altered or excessive action of the PTH2 receptor, e.g. abnormal CNS functions, abnormal pancreatic functions, divergence from normal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or a hypothalmic disease. The present sequence is a peptide analogue of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New parathyroid hormone analogs, used for treating e.g. abnormal CNS or pancreatic functions, abnormal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or hypothalmic disease.

These act as PTH2 receptor agonists or antagonists and can be used in the treatment of disorders resulting from altered or excessive action of the PTH2 receptor, e.g. abnormal CNS functions, abnormal pancreatic functions, intercipity, abnormal blood pressure or a hypothalmic disease. The present sequence is a peptide analogue of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New parathyroid hormone analogs, used for treating e.g. abnormal CNS or pancreatic functions, abnormal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or hypothalmic disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; parathyroid hormone; parathyroid hormone-related protein; PTH; PTHrP; analogue; abnormal CNS function; pancreatic function; mineral metabolism; male infertility; abnormal blood pressure;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

The present invention provides a number of parathyroid hormone (PTH) or parathyroid hormone-related protein (PTHrP) analogues. These act as PTH2 receptor agonists or antagonists and can be used in the treatment of disorders resulting from altered or excessive action of the PTH2 receptor, e.g. abnormal CNS functions, abnormal pancreatic functions, divergence from normal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or a hypothalmic disease. The present sequence is a peptide analogue of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New parathyrbid hormone analogs, used for treating e.g. abnormal CNS or pancreatic functions, abnormal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or hypothalmic disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Length 35;
Sequence 37, Application US/08142551B
Patent No. 5814603
GENERAL INFORMATION:
APPLICANT: Selick, Harold E.
TITLE OF INVENTION: COMPOUNDS WITH PTH ACTIVITY AND
TITLE OF INVENTION: RECOMBINANT DNA VECTORS ENCODING SAME
NUMBER OF SEQUENCES: 132
CORRESPONDENCE ADDRESS:
ADDRESSEE: Burns, Doane, Swecker & Mathis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Indels
                                                                                                                                                                                                                                                                                                                              COMPUTER READABLE FORM:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1;
Sequence 94, Application US/08142551B
Patent No. 5814603
GENERAL INFORMATION:
APPLICANT: Oldenburg, Kevin R.
APPLICANT: Selick, Harold E.
TITLE OF INVENTION: COMPOUNDS WITH PTH ACTIVITY AND
TITLE OF INVENTION: RECOMBINANT DNA VECTORS ENCODING SAME
NUMBER OF SEQUENCES: 132
CORRESPONDENCE ADDRESS:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT 37

US-08-142-551B-50

US-08-142-551B-50

Sequence 50, Application US/08142551B

Patent No. 5814603

GENERAL INFORMATION:
APPLICANT: Oldenburg, Kevin R.
TITLE OF INVENTION: COMPOUNDS WITH PTH ACTIVITY AND TITLE OF INVENTION: RECOMBINANT DNA VECTORS ENCODING SAME NUMBER OF SEQUENCES: 132
CORRESPONDENCE ADDRESS:
ADDRESSEE: Burns, Doane, Swecker & Mathis

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 45, Apsequence 14, Apperence 14, Apperence 5, Apperence 6, Apperence 16, Apperence 16, Apperence 161,
